The Problem: Office 365 Archiving Falls Short

- Office 365's built in archiving solution requires administrators to manually place mailboxes on Litigation Hold, there is no way to prevent users from altering or deleting data prior to the start of the hold.

- Office 365 can process and index Microsoft specific files. Any email attachments outside these supported types will not be searchable.

- Office 365 ties the life of the archive to the life of the mailbox—which means that if you delete a user's mailbox, the archive is lost as well.

- With Office 365 built in archiving you are putting all your eggs in one basket, creating a single point of failure.

    According to a 2015, 3rd party research Insider Risk Report, 57% of survey respondents have deleted email from their business accounts. What if that email contained important company data or attachments with confidential information?

The Hi-Link Solution:

Email Archiving for Office 365 that Meets Your Business Needs

Legal Safeguard for Email Compliance	Lowering IT Costs and Expenditures	Independence and Security
Hi-Link's archiving solution helps companies meet a growing number of regulations on email compliance, eDiscovery, and other legislation	Overloaded servers, increasing storage costs, and complex backup and restore processes place an enormous strain on IT departments and their budgets	At many companies, emails are not stored locally under the company's control but on external servers, such as the Office 365 platform
Hi-Link's archiving solution is also an important tool that helps these companies protect themselves against general legal risk or customer complaints	Hi-Link's archiving solution that is based on consumption permanently reduces these costs	This means that you must rely solely on the provider's backup routine, and that the provider will meet the level of support you expect
Hi-Link's archiving solution provides HIPAA compliance	It also shields against financial risks stemming from data loss or legal conflicts	By archiving all managed email data, you can build on this trust through a simple and effective backup strategy
